

Artwork guidelines

Custom-printed PROFESSIONAL revolving whiteboard

Place logo's, smaller images or texts in the Viewing size to have a safe distance from the frame.

Use the Artwork size for background colours or background images.

INDESIGN TEMPLATES

The easiest way to design your custom-printed PROFESSIONAL revolving whiteboard is to use the InDesign templates that are provided by Legamaster. In the InDesign templates, the right artwork and viewing sizes are already pre-set so you can start with your board design right away.

BOARD SIZE (mm)	ARTWORK SIZE (mm)	VIEWING SIZE (mm)
900 x 1200	878 x 1178	838 x 1138
1000 x 1500	978 x 1478	938 x 1438
1000 x 2000	978 x 1978	938 x 1938

CREATE YOUR OWN TEMPLATE

In case you want to create your own template (e.g. in Photoshop or Illustrator), please use the artwork size to create your design file and then add the viewing size.

Important note:

- Background colours or images can continue to the full artwork size to prevent white lines near the frame of the board.
- Place logo's, images or texts within the viewing size to ensure sufficient distance from the frame.

ARTWORK REQUIREMENTS

- ✓ All images should have a minimum resolution of 300 dpi.
- ✓ Full colour artwork should always be designed in CMYK.
- ✓ Export your final design as PDF file.

DESIGN READY?

Please contact your Legamaster dealer for a price quotation or to order your custom-printed whiteboard.
